CLIENT

Stefanutti Stocks (Pty) Ltd

PROJECT

Ivanplats Shaft 2

INDUSTRY

Mining

REGION

Mogalakwena, Limpopo

SOLUTION

1 X Alimak Scando 650 FC 24/32 single cage with a travelling height of 90m, with 1 landing and a capacity of 2,400kg was installed at Ivanplats Shaft 2. Our Alimak lift was installed to rapidly move equipment and persons to slip form level. Stefanutti Stocks required access to the slip form during the construction of a 90m headgear for Shaft 2. Scaffolding would have been too costly, time consuming and unsafe to implement. The slip form constantly moves, and so the stay frame configuration had to be specifically designed to allow for this instability. The installation of the Alimak lift offered the perfect solution to resolve these challenges.

DATE

Installed in October 2022
